Summary

Final-year B.Tech Computer Science student with hands-on experience building Generative AI applications using Python, LLM APIs, and prompt engineering. Developed full-stack AI applications integrating Groq LLMs and speech-to-text, alongside deep learning and computer vision systems. Experienced in REST APIs, structured LLM output generation, and AI model evaluation. Seeking an entry-level Generative AI role.

Education

B.Tech - CSE, BML Munjal University (2023–2027)
Class XII (CBSE) 81.2%
Class X (CBSE) 94.16%

Skills

Languages: Python, Java, JavaScript, SQL
Generative AI & LLMs: Generative AI, LLMs, Groq API, Prompt Engineering, LangChain, RAG (Basic)
AI/ML & Deep Learning: Machine Learning, Deep Learning (DL), TensorFlow, Keras, CNN, VGG16, Vision Transformers (ViT), YOLOv11, OpenCV, NumPy, Pandas, Scikit-learn
Backend & APIs: Node.js, Express.js, Flask, REST APIs
Databases: MySQL, MongoDB, PostgreSQL
Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks
Tools & Deployment: Git, GitHub, Vercel, VS Code, Jupyter, Google Colab, Streamlit

Projects

StudyScribe — Smart Study Assistant Jan 2026 – May 2026 — GitHub — Live Demo
Tech: React.js, Node.js, Express.js, Groq API (openai/gpt-oss-120b), Hugging Face Whisper, Axios, Multer
- Built and deployed a full-stack Generative AI study assistant that converts PDFs, PPTs, and audio into notes, summaries, quizzes, and flashcards using React.js and Node.js/Express REST APIs.
- Integrated Groq LLM APIs and Hugging Face Whisper for content generation and speech-to-text, with Multer-based file uploads.
- Refined prompts and output formatting to generate structured, parseable quizzes and flashcards.

Plant Disease Detection with AI Treatment Assistant May 2026 – Jun 2026 — GitHub
Tech: Python, TensorFlow, Keras, Flask, Groq API, Gemini API
- Trained and evaluated three deep learning models (custom CNN, fine-tuned VGG16, and Vision Transformer) on PlantVillage (approximately 54K images across 38 classes), achieving validation accuracies of approximately 97%, 99%, and 89%, respectively.
- Developed a Flask application providing top-3 disease predictions with confidence scores and LLM-generated treatment and prevention guidance using Groq and Gemini APIs.

Intelligent Traffic Light Optimization System Aug 2025 – Dec 2025 — GitHub
Tech: Python, YOLOv11, OpenCV, Fuzzy Logic, Q-Learning, Pygame
- Developed a vehicle detection system using YOLO and OpenCV, achieving 93.6% precision, 91.7% recall, and 97.4% mAP@50 in the reported model evaluation.
- Designed an adaptive traffic signal controller combining fuzzy logic, heuristic search, safety constraints, and Q-learning to adjust green-light durations based on vehicle density and queues.
- Built a Pygame simulation to visualize vehicle movement, signal transitions, and traffic conditions.

Experience

RannLab Technologies *(UI/UX Design Intern)* Jun 2025 – Jul 2025
- Designed enterprise Super Admin Portal dashboards in Figma for tenants, users, subscriptions, and transactions.
- Structured user flows for data-heavy admin workflows and iterated on team feedback.

Strokes Club, BML Munjal University *(Executive Committee – Operations)* Aug 2024 – Aug 2025
- Organized 15+ campus art events and workshops, coordinating logistics and execution with the club team.
- Engaged students from other colleges to encourage inter-college participation.

Certifications

- Solved 215+ problems on LeetCode
- Generative AI Studio, Simplilearn (2026)
- Gen AI: Beyond the Chatbot, Google Cloud via Coursera (2026)
- Python, SQL & MongoDB Training, E-Gain Coaching Centre (2024)
